

WorkAlign® Mobile

MOBILITY FOR THE MAINTENANCE WORKFORCE

Control EAM work flow with data accessibility, integrity and speed for field workers

Users of ERP-based asset management systems have another reason to look to VIZIYA WorkAlign solutions: mobility. WorkAlign Analytics, Scheduler, and Warranty Tracker complement and extend the capabilities of the major EAM systems, while VIZIYA WorkAlign Mobile makes those solutions accessible from your preferred mobile device.

Asset management by its very nature is a mobile function, since equipment, facilities, and fleets tend to be distributed across one or multiple sites. Maintenance technicians and engineers should have ready access to data and be able to enter critical information throughout the EAM work flow. To protect data integrity, workers should be able to perform work and verify records without carrying around paper or returning to desktop computers for data entry.

WorkAlign® Mobile delivers robust capabilities and maximizes the utilization of field workers. With easy access to information throughout the EAM work flow, workers can efficiently capture work order data, materials activities, asset history and readings, as well as view and enter collection plan results. Clean, simple, role-based screens and process flows provide the visibility and functionality required from the field, without all the clutter and complexities of typical ERP-based solutions. As a result, asset availability is improved due to the timeliness and accuracy of work order notifications and confirmations.

MOBILE BENEFITS SUMMARY

- Deliver knowledge to the field
- Eliminate paper processes
- Enhance workforce productivity
- Improve data speed and quality
- Increase safety and compliance

Rapid Value

With WorkAlign® Mobile, ROI begins almost immediately. Its rapid and predictable implementation is unlike the time and materials approaches of other, more difficult EAM mobility solutions. Quick, out-of-the-box implementation and easy configuration have you up and running in just a few days.

Enhanced Productivity

VIZIYA WorkAlign® Mobile increases wrench time and decreases desk time by offering comprehensive, maintenance-specific functionality in easy-to-use screens that are tailor-made for popular mobile devices. Work orders can be planned in the field, not only improving the time required, but also improving the quality of information and instruction.

Safety and Efficiency

Ready access from the field to detailed, step-by-step instructions, drawings, and asset history enhances the safety and efficiency of maintenance processes as well as the manufacturing operation as a whole.

Information Integrity

WorkAlign® Mobile improves the quality and timeliness of maintenance information and compliance reporting because there is no lag time associated with data entry. All data is captured at the source, ensuring accuracy and completeness.

Process Efficiency

WorkAlign Mobile supports compliance mandates such as reducing the carbon footprint. By eliminating paper from the process, it reduces costs and avoids risks such as lost or damaged notes and illegible handwriting.

Connected or Disconnected

Field personnel are not always connected to the network, but with VIZIYA WorkAlign Mobile, that's not a problem. Users can complete their work or access asset records without worrying about connections. Any data collected in disconnected mode will be automatically and securely synchronized with the Oracle database when the user reconnects with the network; no complicated data replication procedure is required.

Robust Capabilities

WorkAlign Mobility Work Management:

- Create, update, process, and complete work orders
- Assign work to people and instances
- View, issue, and return parts
- View and add attachments (including camera images)
- Enter meter readings, failure information, and quality results
- Enter timecards
- Capture signatures
- Perform advanced filtering

WorkAlign Mobility Asset Management:

- Body View asset information
- View failure history
- View work order history
- View and filter the entire asset hierarchy
- Enter meter readings
- Perform functions right from the hierarchy

WorkAlign Mobility Materials Management:

- Enter purchase order receipts (use any bar code printing system)
- Perform storeroom transfers
- Perform item queries (including on-hand availability by storeroom)
- Perform parts issues (one-step or two-step)
- Perform parts returns
- Enter cycle counts
