

WorkAlign® Warranty Tracker

VIZIYA WorkAlign® Warranty Tracker, a purpose-built solution for Maintenance, delivers actionable intelligence to track and claim your warrantable repairs.

Fully integrated with SAP, VIZIYA WorkAlign® Warranty Tracker allows you to track warranty and automatically presents vendor claims for review and potential reimbursement.

A successful warranty claim is one of the easiest ways to contribute hard dollar savings directly to your company's bottom line and to ensure budget targets are achieved. Even better, companies can increase production uptime, improve equipment design, and strengthen their supplier relationships. For example, armed with data, Reliability Engineering can modify asset maintenance strategies driving warranty failures down and achieve greater asset uptime and production. Warranty claims that reveal high rates of early failure also enable the engineers to reassess their design criteria to proactively prevent breakdowns.

Warranty Tracker allows you to track warranty at the equipment and/or material level allowing you to manage warranties for equipment which have sub-assemblies covered under different warranty terms. Terms may include calendar based warranty durations or any number of consumption-based measures, such as mileage, meter readings, or hours in service. Any single component or part, like an engine or transmission, can be assigned to as many terms and contracts as required.

Additional key features include visibility of existing work orders so that you can coordinate warranty-related work at the same time or detect patterns of failure. Also Warranty Tracker reconciles claims versus vendor payments received to provide up-to-date status and reporting. Warranty Tracker can be up and running in just a few days. Easy, out-of-the-box delivery saves implementation time, money and effort, and speeds the time to ROI. Fixed implementation costs and scalable license pricing accommodate customers of all sizes. Additionally, going live with a single central repository for all warranty terms simplifies ongoing program administration.

BENEFITS

Drive Asset Utilization

- Improve asset performance since warranty claims often lead to re-designs or may prevent future warranty claims.
- Integrate with WorkAlign® Scheduler to ensure that warranty-required work is performed as required.

Improve Cost Savings

- Recover or avoid maintenance costs by ensuring that in-warranty repairs are filed with the vendor for reimbursement
- Achieve budget targets for maintenance with improved visibility and tracking
- Use historical claims records for future vendor negotiations and selections

FEATURES

- **Tracks warranty status** of equipment, sub-assemblies, and/or material
- **Documents warranty duration** by calendar or by consumption (mileage, hours in service, etc.)
- **Reviews maintenance work orders** against warranty status
- **Creates vendor claims** for warranty reimbursement
- **Tracks reimbursement** of claims
- **Allows for flexible process flow** designed to easily accommodate your company's unique needs

KEY FEATURES

Improve Production Uptime and Reimbursement by Tracking Warranties

Identify which new equipment, material or sub-assemblies, rebuilt parts, and contract labor are warranted. By documenting and tracking all warranties you are armed with visibility and the data to increase production uptime, recover costs, improve equipment design, and strengthen your supplier relationships.

Maximize Reimbursements by Documenting Warranty T&Cs

Document whether material and labor for repair, rebuild, and/or replacement are included and for what duration. Document conditions or processes required in order to qualify for the warranty, for example scheduled oil sampling, mileage, or meter readings. Document when the clock starts, for example, when in use or at purchase.

Improve Production Uptime and Asset Availability

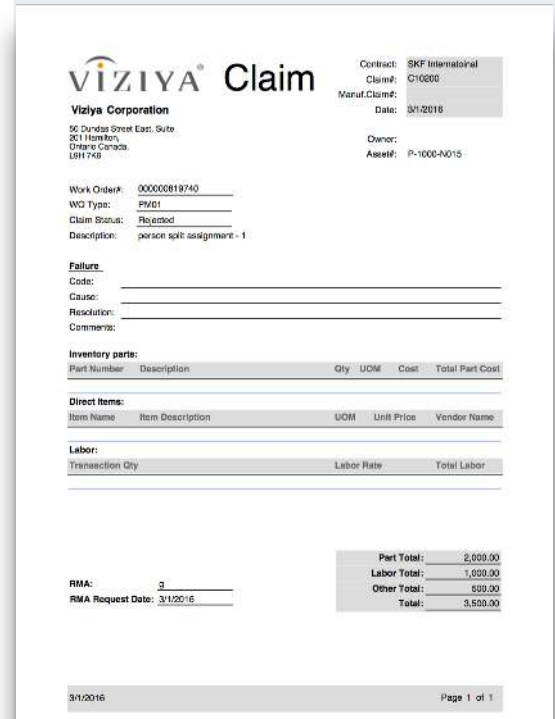

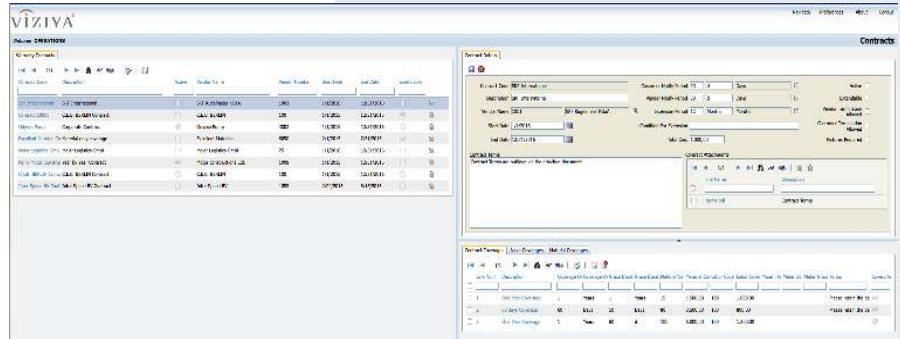

Warranty Tracker allows users to coordinate warranty-related work at the same time or detect patterns of failure. Warranty claims that reveal high rates of early failure enable the engineers to reassess their design criteria to proactively prevent breakdowns and achieve greater asset uptime and production.

Maximize Reimbursements with System-Generated Claims

Work Orders are validated against contract, coverage on equipment and materials, and dates. The claims process allows for full viewing of Work Order details from SAP, so eliminating the need to go back and forth between the applications to make an educated decision. Users can enter the dollars they wish to claim for Materials, Labor, and Other costs and file the claim.

Maximize Reimbursements with Claim Reconciliation

Warranty Tracker reconciles claims versus vendor payments received to provide up-to-date status and reporting and to ensure maximum reimbursement. Reports can be generated and saved.
